

Outsourced Printing Solutions for Payroll, AP, Revenue, Royalties & More

What is SPS?

Makers of the popular Create-A-Check payment management software, Piracle developed SPS as a simple, secure check printing service for businesses. SPS can be used to print payroll, AP, revenue, royalty, and any other checks a business requires. You send us your data and we take care of the rest in a secure environment.

How does it work?

The customer will generate a "print" file from their accounting system (containing the form data such as accounts payable checks, revenue checks, invoices or statements) and place that file in a secure folder on their network.

Using Piracle's Encrypted Delivery Service, a copy of the file will be placed in a pre-determined location on the customer's network (for backup purposes) and the file will then be transferred to Piracle's secure FTP site. A file receipt email notification will be sent to the customer after the file transfer has completed. In a secure/locked down environment, the items will be printed, folded, stuffed and mailed.

Is it secure?

Having been in business since 1991, our systems have generated millions of secure checks.
